

II. CLAIM AMENDMENTS

1. (Currently Amended) A process comprising:

Sed
RI
detecting at a first location if a video signal represents a selected type of image;

receiving said video signal at a second location not in the same disclosure as said first location; and

A1
printing an image from said video signal at said second location if said video signal does not represent said selected type of image.

2. (Original) The process of claim 1, wherein said selected type of image represents a member of a group consisting of currency and negotiable securities.

3. (Original) The process of claim 1, wherein said detecting step comprises scanning an object at said first location to produce said video signal.

4. (Original) The process of claim 1, wherein said printing step comprises xerographically printing.

5. (Original) The process of claim 1, wherein said printing step comprises ink jet printing.

6. (Original) The process of claim 1, further comprising taking corrective action if said video signal represents said selected type of image.

7. (Original) The process of claim 6, wherein said corrective action comprises invalidating said video signal.

8. (Original) The process of claim 6, wherein said corrective action comprises stopping said printing step.

A1
COA
Sub
B1
9. (Original) The process of claim 8, wherein said stopping step prevents printing even a partial image.

10. (Original) The process of claim 1, further comprising:

adding to said video signal a validation code at said first location if said video signal does not represent said selected type of image, and

checking at said second location for said validation code.

11. (Currently Amended) The process of claim 10, wherein said adding step comprises adding a validation code, said code being separate from the video signal ~~validation code~~.

Sub
P. 1
12. (Currently Amended) The process of claim 10, wherein said adding step comprises adding an ~~embedded in the video signal~~ validation code, said code being embedded in the video signal.

13. (Currently Amended) An apparatus comprising:

a detector at a first location for determining if a video signal represents a selected type of image; and

A1
CDL
a corrector at a second location taking corrective act if said video signal represents said selected type of image, said locations not being in the same enclosure.

14. (Currently Amended) The apparatus of claim 13, wherein said corrector comprises an ~~adder~~ adding a validation code to said video signal if said video signal does not represent said selected type of image, said ~~adder~~ being disposed at said first location, ~~and.~~

Sub
P. 1
15. (Currently Amended) The apparatus of claim 14, wherein said ~~adder~~ adds a validation code, said code being separate from the video signal validation code.

16. (Currently Amended) The apparatus of claim 14, wherein said ~~adder~~ adds an ~~embedded in the video signal~~ validation code, said code being embedded in the video signal.

17. (Original) The apparatus of claim 13, wherein said corrector comprises an invalidator altering said video signal.

18. (Original) The apparatus of claim 13, wherein said selected type of image represent a member of a group consisting of currency and negotiable securities.

19. (Original) The apparatus of claim 13, further comprising a scanner scanning an object to provide said video signal.

20. (Currently Amended) An apparatus disposed at a second location for receiving a video signal from a first location, said locations not being in the same enclosure, said apparatus comprising:

a detector receiving said video signal and determining the presence of a validity code; and

a printer printing a reproduction of said video signal only when said validity code is present.

21. (Original) The apparatus of claim 20, wherein said printer comprises a xerographic printer.

22. (Original) The apparatus of claim 20, wherein said printer comprises an ink jet printer.

23. (Currently Amended) The apparatus of claim 20, wherein said printer does not print even a partial image if said video signal represents asaid selected type of image.

24. (Cancelled)

25. (Currently Amended) A xerographic printer disposed at a second location comprising:

at least one station applying a video signal from a first location to a member, said locations not being in the same enclosure; and

an image processor receiving said video signal and providing it to said station only when a validation code is present.

26. (Original) The printer of claim 25, wherein said validation code is present only when said video signal does not represent a member of a group consisting of currency and negotiable securities.

27. (Original) The printer of claim 25, wherein said processor does not provide even a partial video signal when said code is not present.

28. (Original) The printer of claim 25, wherein said station includes a scanner coupled to said processor, a drum disposed

Sub
B1 proximate said scanner, a development station disposed proximate
said drum, and a cleaner disposed proximate said drum.

Al
COR 29. (Original) The printer of claim 25, further comprising a
plurality of stations each of said stations receiving a color
component signal of said video signal.
